PURE AIR PROS
BREATHE BETTER,LIVE BETTER

PURE AIR PROS · SOUTH FLORIDA

The Clean-Air Guide.

What's really in the air inside your home — and the honest, science-backed way to make it cleaner. Breathe better, live better.

FAMILY OWNED · NORTH MIAMI · SINCE 2016 | 24/7 SUPPORT (754) 702-7681 | pureairpros.co

THE PROBLEM IS INVISIBLE

The air inside your home is working against you.

We spend most of our lives indoors — and in South Florida's heat and humidity, the air inside a home quietly accumulates far more than the air outside. Your HVAC moves the same air through every room thousands of times a day, carrying whatever it picks up to the people you care about most.

90%
of our time is spent indoors — U.S. EPA

2–5×
more polluted than outdoor air — U.S. EPA

30–50%
target indoor humidity to limit mold — EPA

WHAT'S ACTUALLY IN THERE

Six things circulating through your vents right now.

Mold & mildew spores
Florida humidity is a year-round invitation. Spores thrive in ducts and travel room to room.

VOCs & off-gassing
Cleaners, paint, furniture and flooring release gases a paper filter physically cannot trap.

Pollen & allergens
Pollen, dust mites and pet dander recirculate and settle — the engine behind daily sniffles.

Fine particles (PM2.5)
Small enough to reach deep into the lungs — from cooking, traffic and outdoor smoke.

Airborne microbes
Warm, dark ductwork is ideal for microbial growth standard filters were never built to address.

Odors that linger
Pets, cooking and damp smells aren't "freshened" away — they're gases that need to be broken down.

WHY YOUR FILTER ISN'T ENOUGH

Filters trap. Active purification destroys.

A standard filter is a net — it catches some particles as air passes through, once. It does nothing to gases, odors or microbes, and never touches the air sitting in your rooms.

Capability	Standard filter	Active purification
Captures large particles	**Yes**	**Yes***
Neutralizes gases & VOCs	No	**Yes**
Breaks down odors	No	**Yes**
Addresses airborne microbes	Limited	**Yes**
Treats air in rooms, not just the duct	No	**Yes**

THE SCIENCE — PHOTOCATALYTIC OXIDATION

Full-spectrum UV light reacts with a catalytic surface to produce natural oxidizers — the same cleansing process found in the outdoor atmosphere. As your HVAC runs, these are carried through the ducts to break down gases, odors and microbes at the molecular level, whole-home, 24/7. **Filters physically can't remove a gas or odor molecule — active purification can.**

*Best results come from active purification alongside good filtration — they solve different problems. The two together is the standard we install.

THE SOLUTION & OUR PROCESS

The Respicaire® AirSterilizer PRO.

A professional, in-duct whole-home purification system — installed once, working silently at every vent in your home.

- Active, not passive — treats the air throughout your home.
- Whole-home coverage via your existing ductwork.
- Targets gases, odors & microbes filtration leaves behind.
- Runs 24/7, silently — just an annual lamp service.
- Built for Florida humidity and continuous-run AC.

THE PURE AIR PROCESS

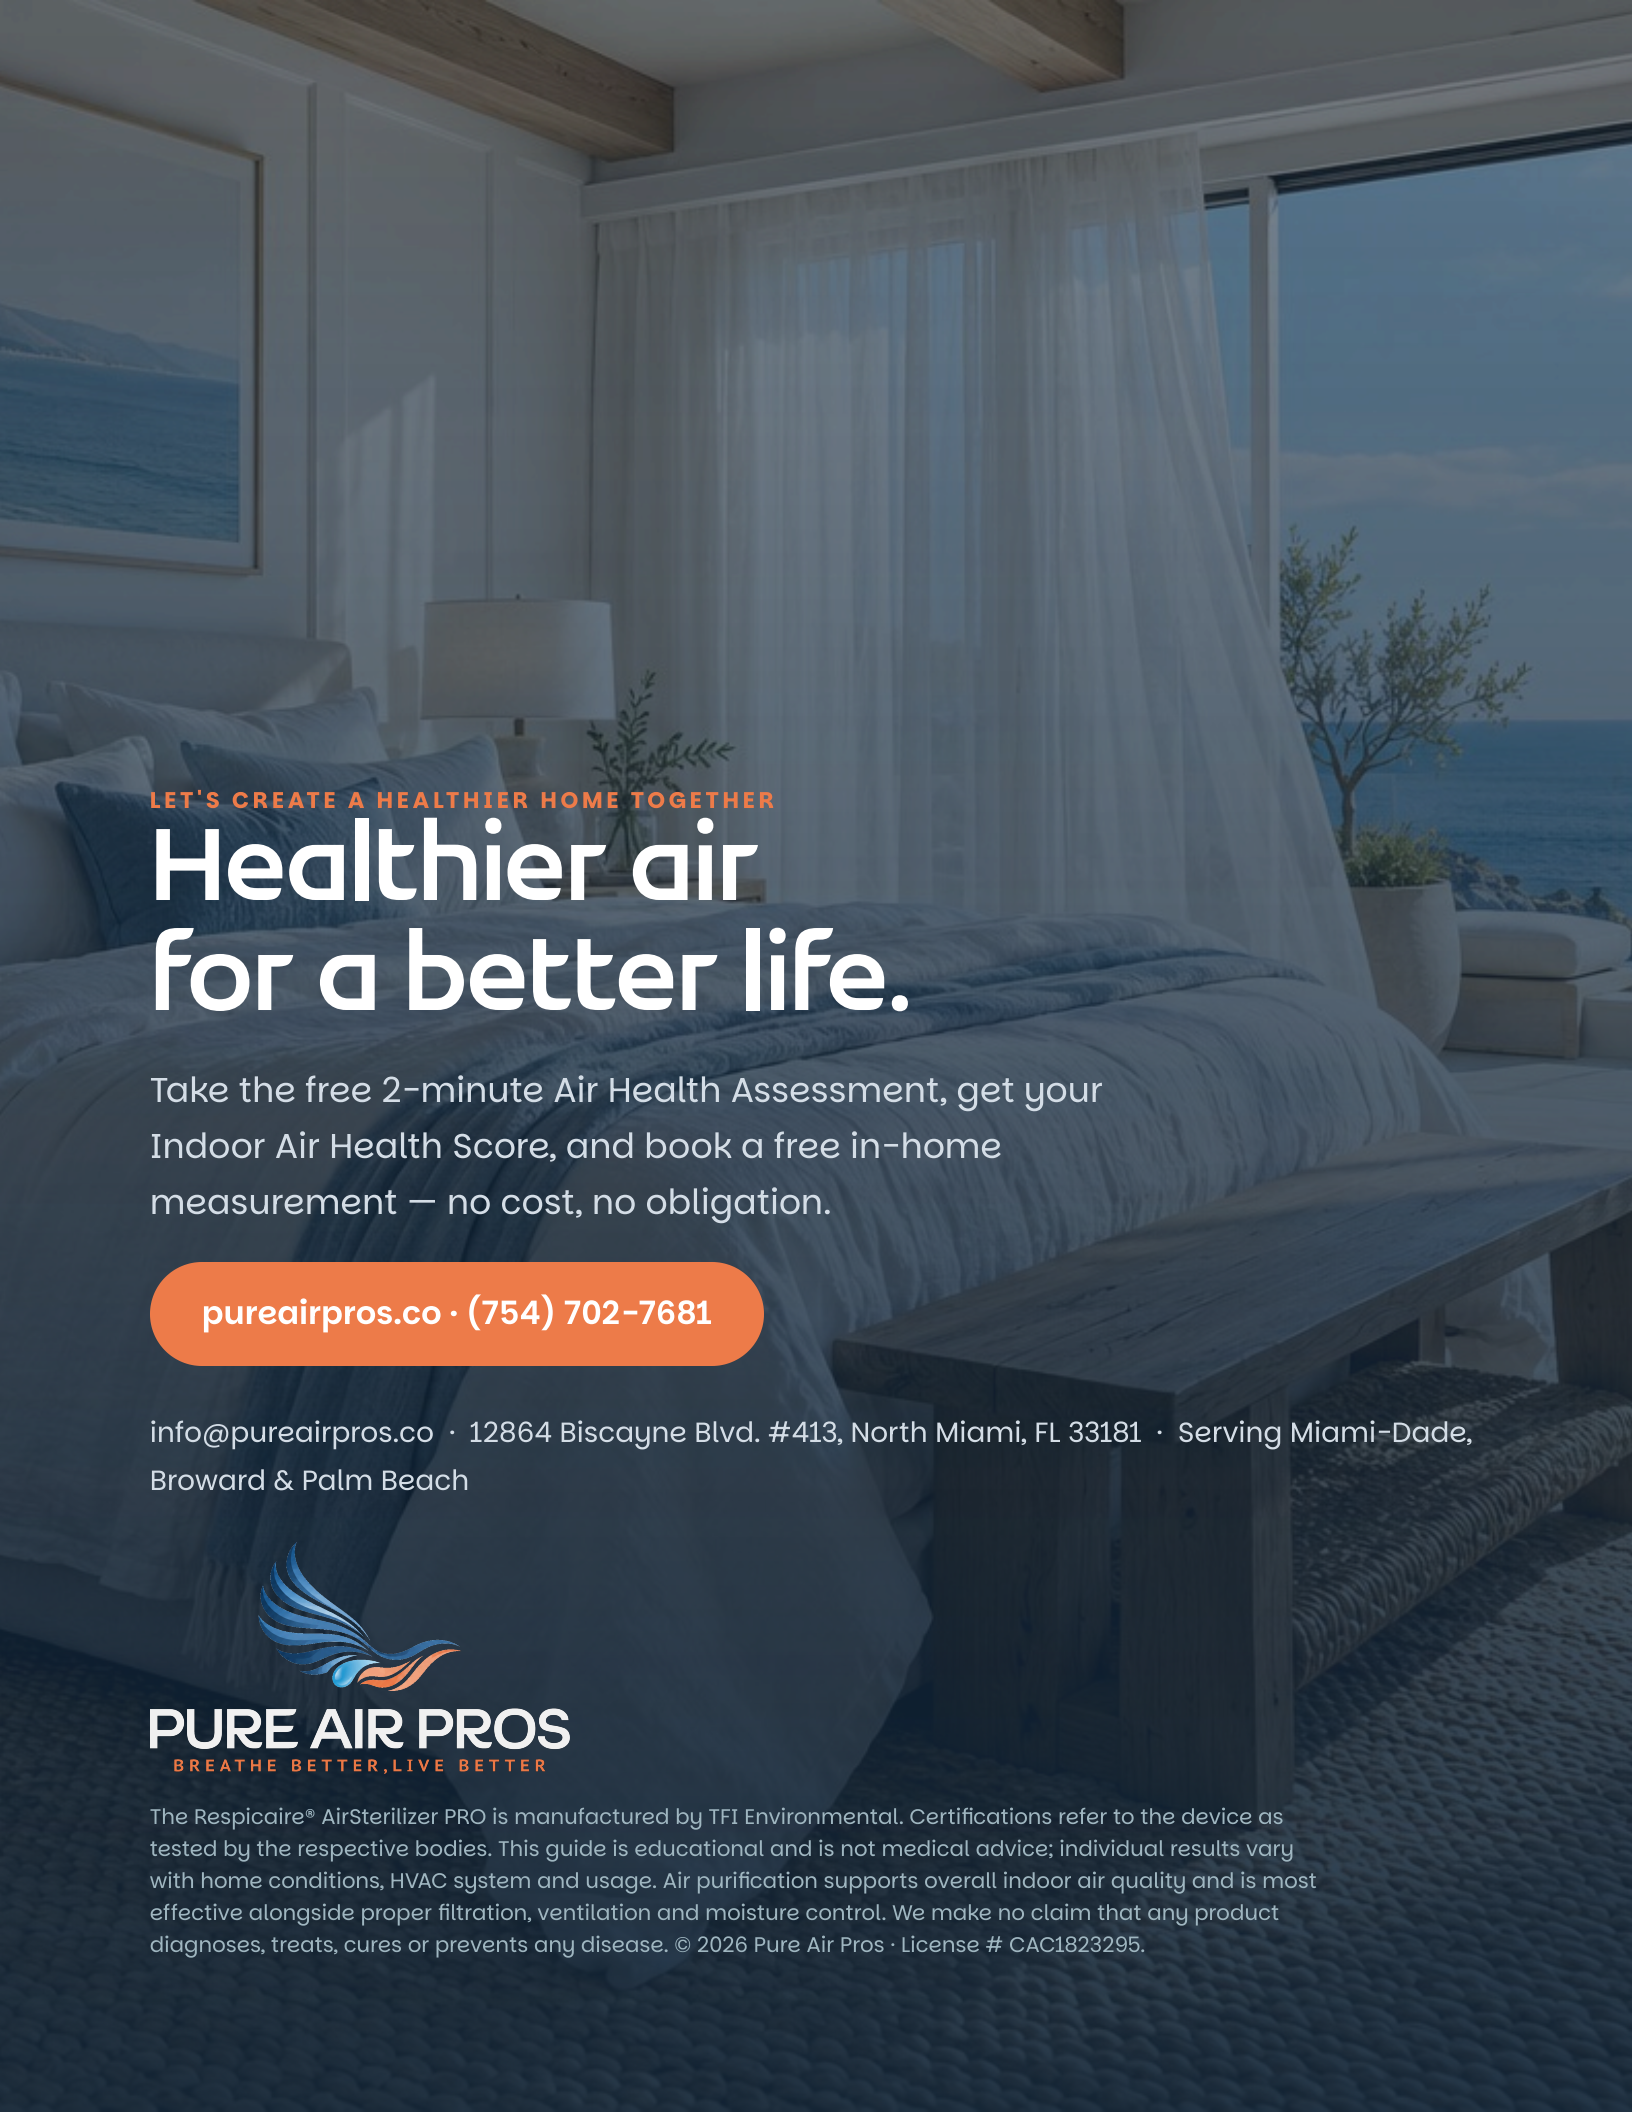

01 Assess
We evaluate your home's air and HVAC, no cost or obligation.

02 Clean
We remove buildup from your ducts and system.

03 Filter
We install high-performance filtration solutions.

04 Purify
We integrate active purification to reduce gases and odors.

05 Maintain
We keep it performing with ongoing care and support.

LET'S CREATE A HEALTHIER HOME TOGETHER

Healthier air for a better life.

Take the free 2-minute Air Health Assessment, get your Indoor Air Health Score, and book a free in-home measurement — no cost, no obligation.
